Reference: Application for General Permit No. 4
Temporary Protective Enclosures for Shellfish

Commissioner Bowman,

According to the notification procedures in General Permit No 4 I am submitting the following information for your consideration in issuing a General Permit for the use of temporary protective enclosures to grow shellfish (oysters) on leased ground.

Name: Andy Drewer
Address: 19424 Saxis Road
Saxis, Va. 23427
Phone: 757 824 5517
Location: Pocomoke Sound / Fishing Creek
Plat File Number: 18240
Acreage containing structures: 15 acres
Maximum Structures: 2499
Description of Structures: Vinyl coated wire structures measuring 3' x 4' x 4" with 8" legs (currently using) and 4'x 6' x 6" with 8" legs (proposed).
Species : Native Oyster (crassostrea virginica)
Suminoe Oyster (crassostrea ariakensis)

Description of area: This lease begins at the mouth of Fishing Creek and extends into a cove that is bounded on all sides by marsh. Total lease consist of 44.21 acres of which 15 acres will be used for temporary protective enclosures at the entrance from Pocomoke Sound. The entrance to Fishing Creek is approximately 800' wide and narrows to approximately 500' before entering the cove. The bottom is sandy with no SAV. Within 500' there are no fixed fishing devices, no shellfish beds, and no piers or docks.

Water depths(at mean low): 12" – 36"

Tidal Range: 3' – 3 ½'

Minimum vertical clearance at low water: 1" – 24"

Estimated date of placement: Enclosures measuring 3' x 4' x 4" are currently on the bottom in the exact area as described above and have an overall height of 12" or less without buoys attached. The estimated date for buoy attachment and use of larger enclosures is April 30, 2009.

Additional Information: These enclosures have been used to grow oysters for the past 4 years and have created no hardship for landowner or impeded access to navigable waters. Since they do not exceed 12" in height they currently do not require a permit. At the present time these enclosures can not be worked once the tide has risen to a certain level. By placing a buoy on each enclosure they could be located and hoisted aboard a vessel. Additionally by placing a buoy on each enclosure it would be much safer for those using navigable waters.
